Remarks:

1. This chart gives guidelines of lighting options for AquaVim's Lake View, Ocean View, and Moon View series aquariums based on common knowledges of aquatic lives generally available in aquarium stores. This chart is by no means a guarranty of successful keeping of your aquarium lives. Consult your aquarium specialist for requirements of specific species.
2. When using metal halide (MH) for freshwater plants, we suggest use of the metal halide bulbs with 7500K or lower Kelvin ratings.
3. We recommend use of 10,000K or 14,000K bulbs in Kelvin rating for reef tanks between 24 to 28" high, 14,000K or 20,000K for reef tanks between 28 to 32" high, and 20,000K for 32" and higher reef tanks.
4. If the light system you choose for your reef tank is at the lower range of wattage per gallon, try place your corals demanding more light on higher levels of your live rocks, or arrange your settings so the corals are closer to the light source.

Note: * For full cylinder tanks, we suggest use of 2 fixtures, so that you give light to both sides of the tank, unless your ordered tank has no overflow box in the middle of the tank.

* To view AquaVim lighting fixtures, please go to: <http://aquavim.com/light%20fixtures.htm>
